## CIS: Cybot Cyber Security System

### AI Crest Approved Automated Penetration Testing

Imagine your own cyber security engineer who never sleeps, knows how all your systems work, thinks autonomously, and is reeducated every week on the latest threat landscape. Our discrete hardware appliance plugs into your network and regularly examines and detects vulnerable computers and IT equipment which could allow Cyber criminals access to your data and network.

The system utilises high-speed hardware and Artificial Intelligence (AI) to constantly learn your systems and keep a watchful eye on changes and new ways hackers can compromise your systems. Our system is CREST approved, assuring the gold-standard in penetration testing.

### Website Vulnerability Testing

CIS: Cybot also tests your company website, ensuring any known vulnerabilities are highlighted. Have confidence and comfort your website is safe from known attacks and compromises. Cybot is always protecting your public website from being defaced, deleted, GDPR data breaches, and keeps infections far from your core business systems.

### Remote Cyber Security Monitoring and Resolution

CIS: Cybot includes secure Remote Monitoring by our IT Professionals. CIS is ready to action any new vulnerability on your systems and assist in resolving issues quickly, keeping the risk to your businesses minimised.

### Proactive Executive Audit Reporting

CIS: Cybot sends regular Executive reports to meet compliance requirements for GDPR and Cyber Essentials, and gives peace of mind that the company IT systems are safe from IT vulnerabilities and cyber attacks.
