

What is CYDEFENCE?

CYDEFENCE is a Managed Vulnerability Scanning Service that examines your IT systems to identify security weaknesses that can leave an organisation exposed and vulnerable to a cyber-threat. Vulnerability scanning is completed by a highly specialised software tool that interrogates IT systems to collect data which is then compared to a database of known flaws or vulnerabilities.

Managed Vulnerability Scanning is a fundamental component of any security testing programme for identifying existing or new vulnerabilities and security misconfigurations across your systems. Failing to understand and remediate the vulnerabilities you have within your environment could present an attacker the opportunity they need to gain access to your systems. We use robust automated detection engines to provide ongoing monitoring to detect and report emerging threats. See beyond your existing vulnerabilities 24/7/365.

- Improved security and control.
- Fast identification of vulnerabilities before external threats can take advantage.
- Continuous threat visibility, eliminating blind spots across your environment.
- Vulnerability prioritisation – know what to remediate first.
- Contributes to meeting compliance, governance, and data protection requirements.

Whether your organisation is looking to augment its security testing program or is just getting started, Computing Information Systems' Cyber Division has a comprehensive range of services to help paint the full picture of your security landscape.

YOUR TRUSTED CONSULTANT

Combining the knowledge, skills, logic, and tool sets of our Cyber Security Consultants into one, CYDEFENCE is the perfect solution to consistently satisfy your organisation's needs for quality results.

PRO-ACTIVE SECURITY

Modern hackers don't wait to act and usually execute their attacks within days of new vulnerabilities being discovered. CYDEFENCE ensures that you are secured against even the very latest threats and have time to act before it's too late.

MEET COMPLIANCE, MEET BEST PRACTICES

By having the ability to perform a quality vulnerability assessment whenever you want and however often you want, your organisation can be assured that it will continuously meet security best practices and compliance regulations.

Find your weaknesses, before the hackers do.

CYDEFENCE Managed Vulnerability Scanning Service finds and remediates cyber security weaknesses in your digital infrastructure, to avoid costly data breaches.

ROBUST SECURITY CHECKS OF CRITICAL SYSTEMS

Get the same level of protection as large enterprises and governments worldwide. CYDEFENCE uses leading technology to make the highest quality cyber security accessible to everyone.

RAPID RESPONSE TO EMERGING THREATS

When new vulnerabilities are discovered, CYDEFENCE proactively scans your systems and automatically alerts you, so you don't need to manually scan your systems.

CONTINUOUS EXTERNAL PERIMETER MONITORING

Find out what you expose to the Internet and receive notifications about important changes, such as when open ports and services change, which, if unnoticed, could lead to unnecessary risk.

VISIBILITY OF YOUR CLOUD SYSTEMS

Prevent your sensitive data from becoming inadvertently exposed. Monitor your cloud systems for changes, discover new assets, and automatically synchronise your scan targets with our cloud integrations.

VULNERABILITY PRIORITISATION

CYDEFENCE interprets industry-leading vulnerability scanning tools and prioritises remediation according to results, saving you time to focus on what really matters.

EXPERT REMEDIATION

CYDEFENCE has a dedicated vulnerability research team. We go beyond the basic vulnerability management offering expert advice, mitigation and remediation of vulnerabilities.

What You Get

At Computing Information Systems' cyber division, we understand the demands and expectations for quality information security services. As part of our CYDEFENCE service, your organisation can expect the following:

Project Management & Planning

Status / Progress Reports

Detailed Activity Reports with Timestamps

Experienced & Certified Security Experts

CYDEFENCE

ABOUT US

Computing Information Systems has a cyber security division that offers comprehensive information security services. Our team is comprised of security experts experienced in offensive and defensive operations, allowing us to provide quality information security services. We ensure your organisation is successful with achieving its security goals and remaining one step ahead of malicious adversaries.
