

PROTECTED

CYVEILLANCE

DATA SHEET

What is CYVEILLANCE?

CYVEILLANCE is Extended Detection & Response that provides 24/7 threat hunting, detection, and response capabilities delivered by our expert Cyber Security Division as a fully-managed service. Few organisations have the right tools, people, and processes in-house to effectively manage their security program around-the-clock while pro-actively defending against new and emerging threats. Going beyond simply notifying you of attacks or suspicious behaviours, the CYVEILLANCE team takes targeted actions on your behalf to neutralise even the most sophisticated and complex threats.

With CYVEILLANCE, your organisation is armed with a 24/7 team of threat hunters and response experts who will pro-actively hunt for and validate potential threats and incidents, use all available information to determine the scope and severity of threats, apply the appropriate business context for valid threats, Initiate actions to remotely disrupt, contain, and neutralise threats.

- Advanced threat hunting & detection.
- Combines top-rated machine learning technology with a highly trained team of experts.
- Collaborate with a 24/7 response team that takes action to remotely contain and neutralize threats
- Contributes to meeting compliance, governance, and data protection requirements.

We do the work, but you own the decisions. This means you control how and when potential incidents are escalated, what response actions (if any) you want us to take, and who should be included in communications. Monthly reports let you know what is happening in your environment and what steps have been taken to keep you safe.

ADVERSARIAL DETECTIONS

Most successful attacks rely on the execution of a process that can appear legitimate to monitoring tools. Using proprietary investigation techniques, our team determines the difference between legitimate behavior and the tactics, techniques, and procedures used by attackers.

ACTIVITY REPORTING

Summaries of case activities enable prioritisation and communication so your team knows what threats were detected and what response actions were taken within each reporting period.

PROACTIVE POSTURE IMPROVEMENT

Proactively improve your security posture and harden your defenses with prescriptive guidance for addressing configuration and architecture weaknesses that diminish your overall security capabilities.

CYVEILLANCE

Machine-Accelerated Human Response.

CYVEILLANCE fuses machine learning technology and expert analysis for improved threat hunting and detection, deeper investigation of alerts, and targeted actions to eliminate threats with speed and precision.

ENHANCED TELEMTRY

Threat investigations are supplemented with telemetry from other CISYBER products extending beyond the endpoint to provide a full picture of adversary activities.

HIGH-FIDELITY DETECTION

We combine deterministic and machine learning models to spot suspicious behaviors and the tactics, techniques, and procedures used by the most advanced adversaries.

OUTCOME FOCUSED SECURITY

Every hunt, investigation, and response action results in decision-driving data that is to enhance configurations and automated detection capabilities.

ASSET DISCOVERY

From asset information covering OS versions, applications, and vulnerabilities to identifying managed and unmanaged assets, we provide valuable insights during impact assessments, threat hunts, and proactive posture improvement recommendations.

PROACTIVE DEFENSE

Combining threat intelligence with newly-discovered indicators of compromise identified through threat hunts, CYVEILLANCE proactively protects your environment.

ELITE EXPERTISE

Our highly-trained team of threat hunters, engineers, and ethical hackers has your back 24/7, investigating anomalous behavior and taking action against threats.

What You Get

At Computing Information Systems' cyber division, we understand the demands and expectations for quality information security services. As part of our CYVEILLANCE service, your organisation can expect the following:

Project Management & Planning

Status / Progress Reports

Detailed Activity Reports with Timestamps

Experienced & Certified Security Experts

CYVEILLANCE

ABOUT US

Computing Information Systems has a cyber security division that offers comprehensive information security services. Our team is comprised of security experts experienced in offensive and defensive operations, allowing us to provide quality information security services. We ensure your organisation is successful with achieving its security goals and remaining one step ahead of malicious adversaries.
